

VERTICAL GARDEN PLANT PALETTE DESIGN

VERTICAL GARDEN SUCCESS RELIES ON THREE MAIN FACTORS.

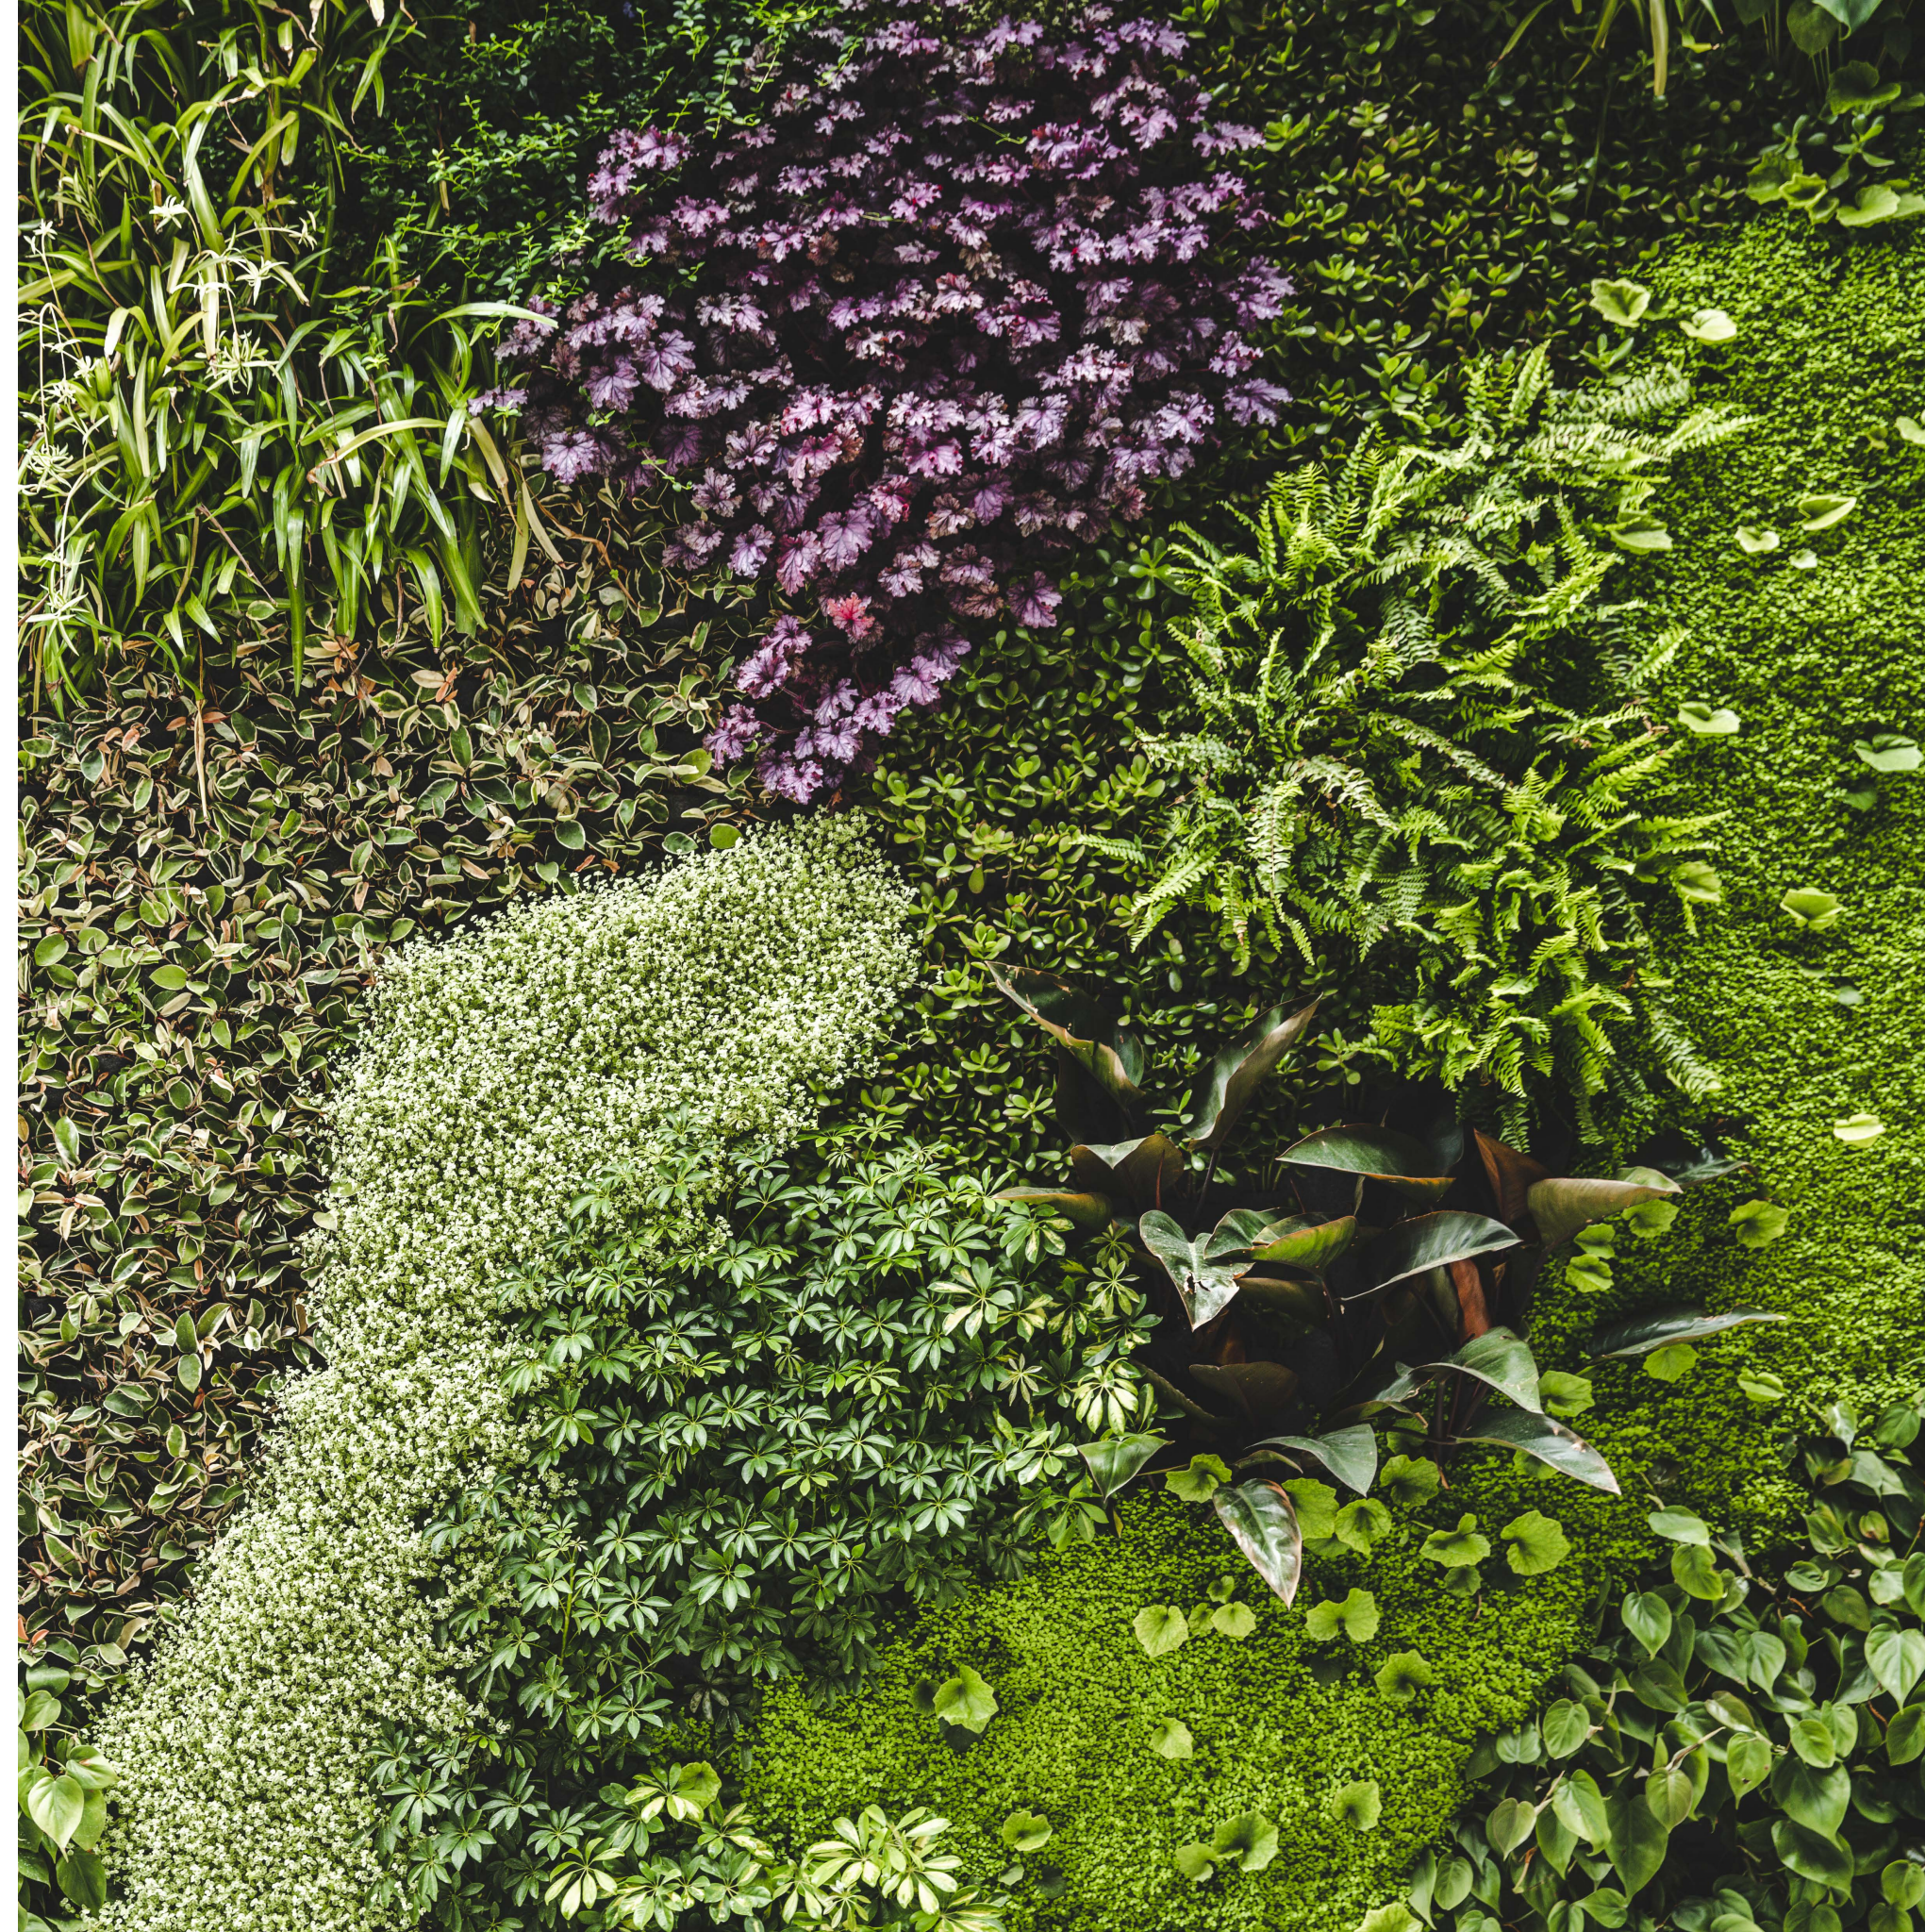

- System
- Plants
- Maintenance

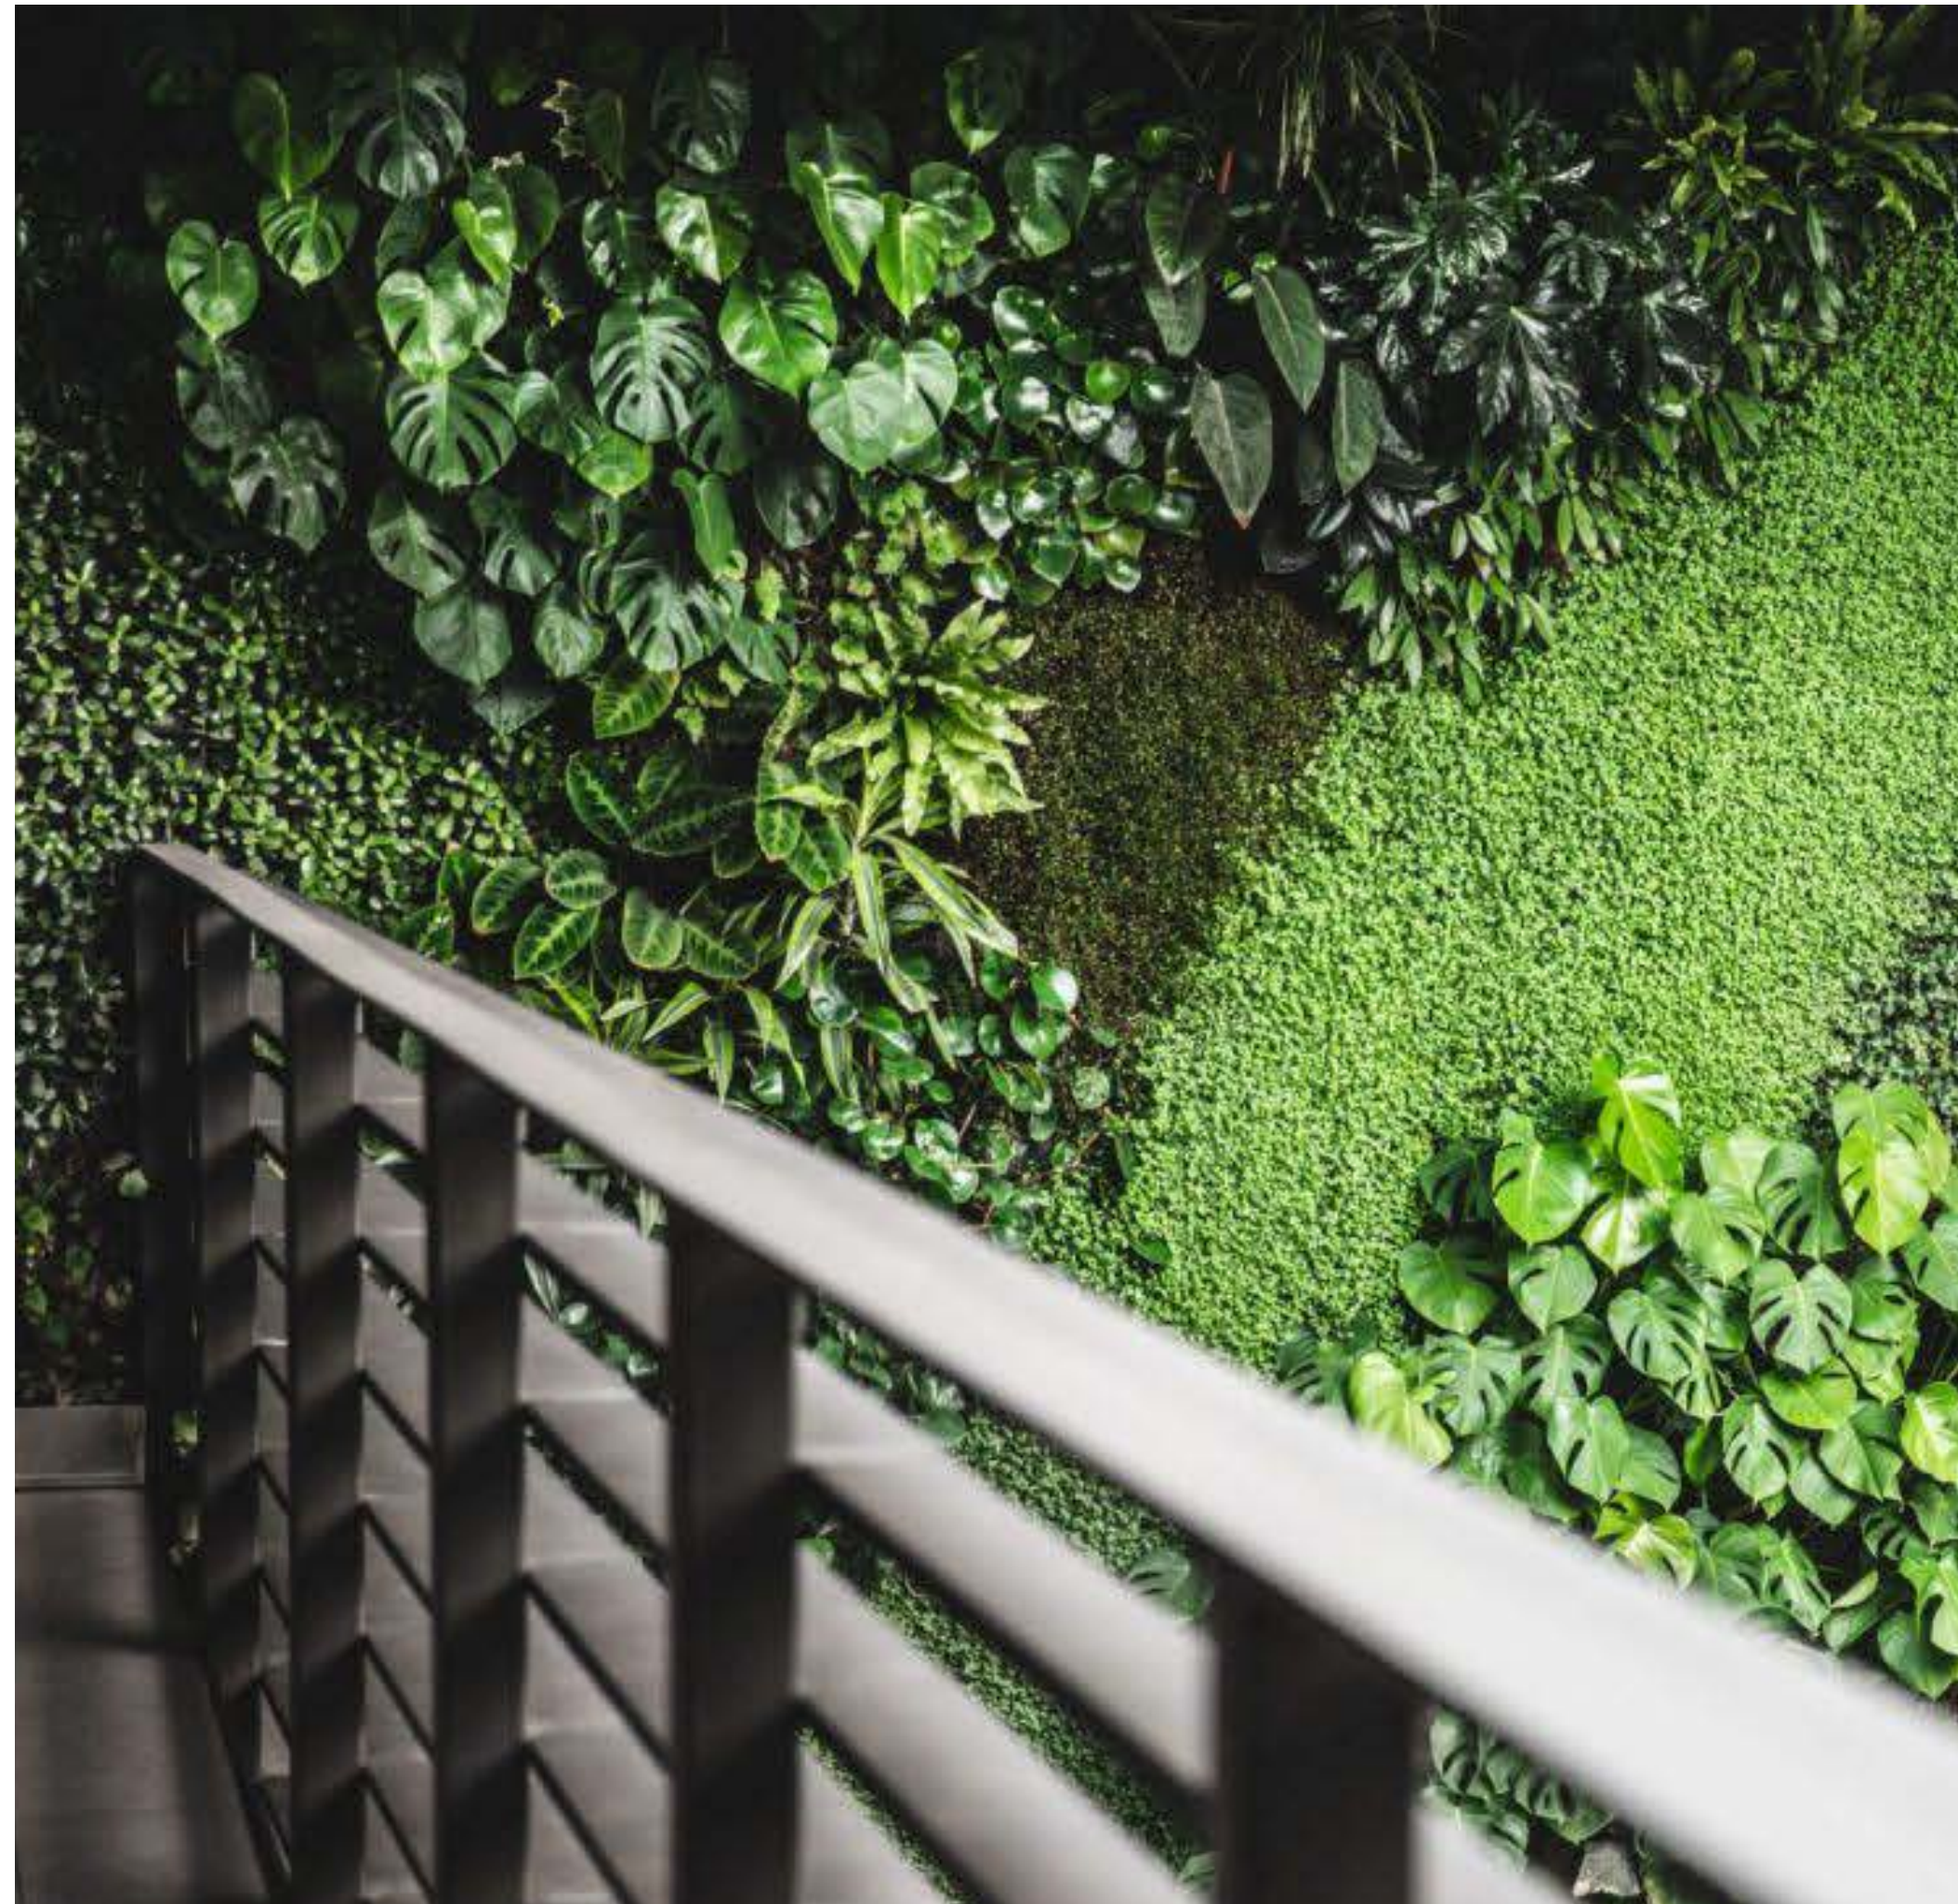

The proper system and maintenance regiment allows various plants to survive and thrive within almost any microclimate.

Over the years the Seasons design team have iterated on specific plant groupings that look good together and grow well together within various microclimates.

Once these plant palette groupings are selected designing / organizing them on a vertical façade in unique ways involves a bit of strategy. It is a combination of design aesthetic & knowing the plants growth habits over time.

We work closely with our customers on overall design intent and plant palette combinations. Depending on the layout / graphic design leads to specific plants types or plant growth habits. We have found that most vertical garden plant design success stems from 3 main elements.

Color difference

Texture difference

Volume difference

Combining all 3 of these in specific patterns is a recipe for success, which we have found all of our customers love.

Seeing these plant palettes grow and evolve over time on a vertical garden is truly a unique experience for everyone of our customers.
